TriNet Medical

Improving practice efficiency with quality health data

“Average reconciliation time was reduced from 8 hours to 1 hour after implementation of the SRX barcode solution. (This hour is

**“REDUCED

Medication Tracking and Inventory Management Solution with Barcode Scanning for EMR/EHR

Overview:

Waterville Pediatrics is a busy practice with multiple providers.

Challenges:

- Manual data entry of patient medication details into EMR/EHR
- Data errors due to tedious manual data entry
- Additional hours and effort required from hospital/clinic staff to fix the data errors
- Reporting to state is a manual process every week
- Delayed billing because of insufficient and incorrect data
- Difficulty tracking inventory and lot management

Solution:

“TriNet Medical’s SRX application was successfully integrated with our EMR and allowed for custom reports within the application.”

Outcome & Benefits:

- “We no longer inadvertently fail to document immunizations into the EMR because of the SRX system, which makes reconciling the state registry much less time consuming.”
- “We are able to quickly identify which child was missed in the state registry because our EMR is up-to-date.”
- “Average reconciliation time was reduced from 8 hours to 1 hour after implementation of the SRX barcode solution. (This hour is because we do not have an interface that talks with our state registry therefore immunizations scanned into the EMR still require manual entry into the state registry.”
